Solving Percent Application Problems Using the an Equations (L6.4)
Basic College Mathematics (9th Edition) answers to Chapter 6 - Percent - 6.6 Solving Application Problems with Percent - 6.6 Exercises - Page 443 43 including work step by step written by community members like you. Textbook Authors: Lial, Margaret L.; Salzman, Stanley A.; Hestwood, Diana L. , ISBN-10: 0321825535, ISBN-13: 978-0-32182-553-7, Publisher: Pearson

Chapter 6 - Percent - 6.6 Solving Application Problems ...

Because 8% is 4/5 of 10%, the tax is 5/4 of one part of the whole bar. Each part of the whole bar is $8. So, the sales tax is 5/4 of $8. 4/5 × $8 = $6.40. The sales tax is $6.40. Step 2 : To find the total cost of the jacket, add the price of the jacket and the sales tax. Jacket price + Sales tax = Total cost. $80 + $6.40 = $86.40

Applications of Percent Worksheet - onlinemath4all

Many applications of percent occur in our daily lives, such as tips, sales tax, discount, and interest. To solve these applications we'll translate to a basic percent equation, just like those we solved in the previous examples in this section. Once you translate the sentence into a percent equation, you know how to solve it.

Solving Applications With Percent | Prealgebra
