Process network synthesis uses the P-graph method to create a process structure. The scientific aim of this method is to find optimum structures. Process network synthesis uses a bipartite graph method P-graph [1] and employs combinatorial rules to find all feasible network solutions (maximum structure) and links raw materials to desired products related to the given problem.

Craniosacral Network Method [EPUB]

A hyperspherical transformation method was used to eliminate the constant sum constraint in statistically analyzing PCMSW data. Moreover, a back-propagation (BP) neural network methodology was applied to establish quantitative models between city-level PCMSW and its socio-economic factors, including city size, per capita gross regional product, geographical location, gas coverage rate, and year.

MATERIALS AND METHODS: The sample size was predetermined at 15 subjects and the cohort size was set with three individuals (i.e., five total cohorts). In a series of consecutive daily sessions, we delivered rTMS to the left posterior parietal cortex and measured resting-state FC with fMRI in a predefined hippocampal network in the left hemisphere.
