How to troubleshoot hardware problems in Linux

If we didn't have an IP address, then we'd want to troubleshoot that issue. The lack of an IP address can be caused by a local misconfiguration, such as an incorrect network interface config file, or it can be caused by problems with DHCP. The most common frontline tool that most sysadmins use to troubleshoot Layer 3 is the ping utility. Ping sends an ICMP Echo Request packet to a remote host, and it expects an ICMP Echo Reply in return.
