technology could provide the life-support systems necessary for human survival in the hostile space environment. Primary responsibility for developing these flight systems obviously would rest with physical scientists and engineers.

Space Medicine In Project Mercury, Introduction
Space Medicine In Project Mercury, CH7-2. Medical Monitors. As early as October 29, 1959, Dr. Stanley C. White, STG, had noted in a memorandum for the Project Director that as Mercury moved into actual manned operations, there would be "fairly considerable requirements for additional medical support in monitoring recovery, and post-

Space Medicine In Project Nasa Mercury, CH5-8 Medical Aspects Of Training On April 27, 1959, Project Mercury was assigned the highest national priority. Two weeks later, on May 12, NASA announced a training program for the seven astronauts "to provide them with the technical knowledge to pilot the nation's manned orbital capsule."

Space Medicine In Project Mercury, CH5-8

Indeed, from the viewpoint of environmental medicine as an applied science, Project Mercury marked the swift transition from what had come to be known as aviation medicine to what is now recognized as space medicine.

prevention or control of exposure to the hazards that may cause astronaut ill health. Both these sciences work together to ensure that astronauts work in a safe environment. The main objective is to discover how well and for how long people ...

Space medicine - Wikipedia
celestial mechanics, aerospace medicine, and electronics, Project Mercury took man beyond the atmosphere into space orbit. It confirmed the potential for man's mobility in his universe. It remains for Projects Gemini and Apollo to demonstrate that potential. Project Mercury was not only a step in the history of flight technology, it was a

Alternative Title: Project Mercury.
Mercury, any of the first series of
crewed spaceflights conducted by
the United States (1961 – 63). The
series began with a suborbital
flight about three weeks after the
Soviet cosmonaut Yury Gagarin
became the first human in space
(see Vostok). Alan B. Shepard,
Jr., rode a Mercury space capsule
dubbed Freedom 7 on a 486-km
(302-mile) flight of 15-minute
duration, attaining a maximum
